## PROFILE

Dynamic Data Business Analyst and Product Manager with 7+ years of experience in data analytics, building scalable data pipelines, performing deep-dive analysis on large datasets, and delivering actionable business insights. Proven expertise in SQL, advanced Excel (VBA, Power Pivot, pivot tables), Power BI, Tableau, data reconciliation, root cause analysis, and creating interactive enterprise reports/dashboards to drive operational efficiency and high-level business decisions. Skilled in translating ambiguous business problems into precise analytical requirements, synthesizing insights from complex data sources, and influencing senior stakeholders through clear data-driven recommendations. Hands-on experience with cloud platforms (AWS, Azure, Snowflake), Python for advanced data analytics, and partnering with engineering teams to deploy robust data solutions. Seeking to contribute strong analytical capabilities and product management expertise to Amazon's Selection Monitoring team.

## EXPERIENCE

### Product Manager (Financial Crimes Technology)

Wipro (Client: US Bank) | Nov 2025 - Present

- Product Manager for Financial Crimes technology programs covering Fraud and Anti Money Laundering (AML), with a primary focus on the Actimize AML ecosystem and its end-to-end data integration landscape.
- Oversee complex ETL operations from the Enterprise Data Lake into the Actimize AML tool, including data pipeline building, system updates, regular maintenance, defect triage, and production stability, utilizing Oracle UDM DB as the key target data store.
- Partner strategically with Data Engineers, business stakeholders, and Financial Crimes Unit teams to ensure seamless and high-performing ETL operations across Actimize and other downstream AML/Suspicious Activity or Transaction monitoring targets.
- Drive high data-quality standards across AML data flows to minimize false positives and false negatives, directly supporting more accurate alert generation, investigation readiness, and regulatory compliance reporting outcomes.
- Manage core Agile delivery activities including requirements gathering, cross-functional prioritization, sprint planning, backlog refinement, epic and user story creation, acceptance criteria definition, and comprehensive JIRA tracking/reporting.
- Coordinate cross-functional communication between technology and business teams to clarify complex functional requirements, resolve blockers, maintain clear delivery visibility, and support continuous improvement of enterprise AML data pipelines.

### Capital Markets Business Analyst

Anblicks (Client: RBS) | Jun 2024 - Mar 2025

- Owned end-to-end analytics and automated reconciliation for large volumes of multi-asset trade lifecycle data (Equities, Fixed Income, FX, Derivatives), performing comprehensive deep dives using SQL and Python to systematically identify booking breaks, static data mismatches, and Straight-Through Processing (STP) failures.
- Conducted meticulous root cause analysis (RCA) on transactional discrepancies and implemented permanent system/process fixes, significantly improving reconciliation accuracy and reducing ongoing operational risk issues.
- Designed and built robust SQL/Python-based reconciliation checks, dynamic mapping tables, and automated monitoring processes for upstream/downstream data alignment across distributed ledgers.
- Created and maintained interactive tracking reports and dashboards for End-of-Day (EOD) batch processes, position updates, risk calculations, and exception queues using Excel VBA and Power BI.
- Collaborated with cross-functional global teams (traders, operations, technology, custodians) and presented data-driven insights/recommendations to ensure seamless data flow and strict regulatory compliance.

- Authored comprehensive Business Requirement Documents (BRDs), Functional Requirement Documents (FRDs), Standard Operating Procedures (SOPs), and operational runbooks while managing end-to-end project components including data gathering, analysis, and solution implementation.

## Senior Business Analyst

Incedo (Client: Verizon) | Jul 2025 - Nov 2025

- Conducted detailed business analysis for Verizon's telecom operations, creating highly structured BRDs and FRDs to document technical requirements and align analytic solutions with core business goals, directly improving network performance metrics and customer experience.
- Designed scalable analytics platforms and real-time data pipelines integrating legacy Oracle environments and Snowflake cloud data warehouses, leveraging optimized Oracle SQL/PL-SQL and Python for high-performance querying and analytics.
- Conducted data-driven analysis of fast-moving market trends and complex cost structures using SQL, Python, and Power BI to support strategic pricing initiatives and executive business decisions.
- Created comprehensive BRDs/FRDs and managed requirements end-to-end to align analytical solutions with business goals, improving operational performance through actionable insights.
- Designed scalable application architectures for enterprise analytics platforms, integrating Oracle EBS R12 (Order Management - OM, Inventory - INV) modules and Snowflake for real-time data pipelines, utilizing Oracle SQL/PL-SQL for optimized querying.
- Developed data-backed pricing strategies for telecom services, analyzing market trends and cost structures using Oracle Discoverer, SQL, Python, and Power BI, achieving a notable 15% revenue increase through optimized pricing models.

## Data Business Analyst

Capgemini | Jan 2022 - Feb 2024

- Designed and developed Oracle EBS R12-based enterprise solutions across core financial and supply chain modules (Accounts Payable - AP, Accounts Receivable - AR, General Ledger - GL, Inventory - INV) for client ERP systems, creating custom D2K Forms/Reports and XML Publisher reports to support financial and inventory processes.
- Built, optimized, and maintained data pipelines using Oracle SQL/PL-SQL and Power Query, integrating with SAP and Microsoft Azure for high-throughput data warehousing and advanced business analytics.
- Built and optimized robust data pipelines using Oracle SQL/PL-SQL and Power Query for financial and inventory data integration across SAP and Azure environments.
- Developed professional management reports and interactive dashboards to support analytics and executive decision-making; conducted regular deep-dive analysis on large, un-structured datasets.
- Defined business requirements, performed conceptual data modeling, and led User Acceptance Testing (UAT) while collaborating closely with engineering and business stakeholders in Agile environments using JIRA and Confluence.
- Created detailed BRDs and FRDs for large-scale data integration projects, using JIRA and Confluence to manage requirements and facilitate stakeholder alignment in Agile environments.
- Conducted thorough unit testing and supported system integration and UAT testing for Oracle-based reports and dashboards, preparing comprehensive technical documentation, deployment instructions, and test plans.

## Business Data Analyst

AstraZeneca | Aug 2020 - Apr 2021

- Developed and optimized automated data pipelines for Enterprise Quality Vault and Veeva Quality Docs, performing rigorous data analysis, automated cleansing, and clustering with Open Refine and Power Query ETL.
- Designed scalable relational database architecture using Oracle SQL/PL-SQL and MS Access connected directly to SAP HANA Production databases via ODBC, enabling efficient high-volume joins and Country of Origin (COO) reports for Material Master Data (MDM).
- Developed scalable data pipelines and performed analysis, cleansing, and clustering on quality and master data using Oracle SQL/PL-SQL, Power Query, and Open Refine.
- Designed robust database architecture and created analytical reports for Material Master Data (MDM), enabling efficient joins and automated COO reporting.
- Led core requirements gathering and documentation (BRDs/FRDs) for data integration projects, ensuring strict alignment with overall business objectives.

- Developed Oracle D2K Forms and Reports for SAP MDG integration, creating specialized RICE (Reports, Interfaces, Conversions, Enhancements) components to support data governance tasks (Change Requests - CR, File Upload, MASS Change via NWBC), tracked via ServiceNow.
- Created detailed BRDs and FRDs for data integration projects, using JIRA and Confluence to manage requirements and track progress, supporting comprehensive UAT testing for Oracle-based solutions.
- Led product management for internal data integration tools, defining strategic product requirements and multi-quarter roadmaps, collaborating with senior stakeholders to ensure alignment with business objectives.

## Automation Business Analyst

British Telecom | Dec 2019 - Jun 2020

- Designed and developed Robotic Process Automation (RPA) bots using Blue Prism and UI Path for critical network operations, automating manual workflows in a fast-paced Agile environment tracked via JIRA and documented in Confluence.
- Created granular BRDs and FRDs, gathered cross-functional requirements, prepared test cases, identified key performance indicators (KPIs), and thoroughly documented AS-IS/TO-BE processes, using Oracle SQL/PL-SQL for data validation.
- Managed the end-to-end product lifecycle for enterprise RPA solutions, defining robot functionalities and prioritizing features within the backlog, with all technical documentation maintained in Confluence.
- Contributed to pricing strategies for automation services, analyzing cost savings and Return on Investment (ROI) using Oracle Discoverer, JIRA dashboards, and advanced Excel-based models.
- Conducted rigorous UAT testing for RPA bots, preparing test plans and deployment instructions, ensuring functionality strictly met business requirements.

## Healthcare Data Analyst

IBM | 2019

- Analyzed healthcare data (Insurance, Rx, and Claims) for premium clients including BNY Mellon, McKinsey, Ford, and Harvard University, creating highly interactive Cognos and Oracle Discoverer reports with multi-level drill-down capabilities.
- Designed relational database schemas in Oracle for efficient claims and financial data storage, optimizing complex queries and indexing with Oracle SQL/PL-SQL.
- Created clear BRDs and FRDs for advanced analytics tools, using JIRA and Confluence to manage lifecycle requirements and collaborate with engineering stakeholders.

## EDUCATION

### Bachelor of Computer Applications (BCA)

Madurai Kamaraj University (MKU) | Graduation: 2018

## SKILLS & COMPETENCIES (MARKET ALIGNED)

|                                          |                                                                                                                                                                                                                                                                                                               |
